

KEAN ANGELO L. GENOTA

IT INTERN | NETWORKING • SYSTEMS • CLOUD

0915 249 1965 | keanangelo.genota@gmail.com | linkedin.com/in/kean-genota | kean-portfolio-plum.vercel.app

PERSONAL PROFILE

Fourth-year BS Information Technology student at De La Salle University, focused on networking and infrastructure. Most recently helped design a three-site enterprise WAN, owning the Manila main site — and rebuilt its edge layer for fault tolerance after a design review identified a single point of failure. Holds the Cisco Networking Academy CCNA: Switching, Routing and Wireless Essentials badge and a Lean Six Sigma White Belt. Experienced working in Agile teams with Jira, and comfortable moving between infrastructure, full-stack development and user-facing design. Seeking an IT internship in networking, systems or cloud.

TECHNICAL SKILLS

Networking: Cisco IOS, Routing & Switching, VLANs & Inter-VLAN Routing, HSRP, EtherChannel (LACP), Rapid PVST+, VLSM & Subnetting, NAT/PAT, ACLs, DHCP, IPsec VPN, WLAN, Cisco Packet Tracer

Cloud & Infrastructure: AWS (IAM, Lambda, S3, RDS, CloudFront), Docker, Nginx, CI/CD

Systems Administration: Ubuntu Linux, Windows Server, Proxmox, Apache, Network & Switch Security

Programming Languages: TypeScript, JavaScript, Python, Java, Kotlin, C#, C, C++, PHP, GDScript

Web Development: Next.js, React, Node.js, Laravel, Tailwind CSS, HTML, CSS, WordPress

Database Management: MySQL, PostgreSQL, MongoDB, SQLite, Database Design, Role-Based Access Control

Mobile & Embedded: Android Studio, Kotlin, Firebase, ESP32, Arduino IDE

Delivery & Process: Agile, Scrum, Jira, Lean Six Sigma, PMBOK, Requirements Analysis, Quality Assurance

Design & Research: Figma, UX Research, Usability Testing, Prototyping, Aseprite, Canva

EMPLOYABILITY SKILLS

Leadership • Problem Solving • Teamwork and Collaboration • Creativity and Innovation • Communication • Adaptability

WORK EXPERIENCE

Web Development Intern | Marvill Web Development — Remote

March – April 2022

Web solutions provider specialising in custom website design and development for business clients.

- Customised WordPress websites by selecting themes and configuring plugins to meet client specifications and branding requirements.
- Optimised website performance using WP-Optimise and WP-DB Manager, improving database efficiency and page load speed across client sites.
- Delivered project work on schedule across a career immersion programme, completing 88 hours against an 80-hour requirement.

ACADEMIC & TECHNICAL PROJECTS

Multi-Site Enterprise Network Design — Alonzo IT Training Center

September 2025 – Present

Cisco IOS, HSRP, EtherChannel, VLSM, NAT/PAT, ACLs

- Built and progressively expanded a client network across three courses, from a single-site campus network into a three-site enterprise WAN spanning a Manila main campus, a leased annex and a Quezon City campus.
- Owned the Manila main site: VLSM addressing across a /22 block, multilayer core switching with HSRP gateway redundancy, EtherChannel uplinks, Rapid PVST+, DHCP server and relay, NAT/PAT with static NAT for public services, and layered ACL policy between user groups.
- Designed and built the edge-redundancy solution after a progress review identified a single point of failure — a second edge router with HSRP and WAN interface tracking, reworking two point-to-point /30 links into a shared transit VLAN, with a documented rollback path.

DLSU Student Co-Operative (SCoOp) Advanced Order System

January – April 2025

Next.js, TypeScript, Node.js, Agile/Jira

- Replaced a manual Google Forms and spreadsheet workflow in which bulk orders were forwarded by group chat between departments with no real-time view of order or payment status.
- Owned the admin side: order dashboard grouping live orders by status, plus filtering, search across customer and product fields, order editing, pagination and CSV export.

- Integrated four separately built modules into one application, resolving cross-module bugs and standardising interface patterns; maintained the repository across 90 commits.
- Delivered as a four-person Scrum team with product backlog, Jira board and sprint retrospective. Graded at full marks; 99.81% overall.

Konibui — Trading Card Game E-Commerce Platform

May – August 2025

Laravel 12, PHP, MySQL, Docker, Nginx

- Built a containerised e-commerce platform with a buyback system allowing customers to resell products back to the store.
- Architected a four-service Docker Compose stack with health checks, volume persistence and the database port kept off the host network.
- Implemented defense-in-depth security: three MySQL roles created through Laravel migrations mirror the application roles, enforcing least privilege at the database layer independently of application code.

Nviridian — AWS Cloud Architecture Proposal

January – April 2025

AWS, Solution Architecture

- Designed and presented a cloud architecture proposal for an e-commerce platform using CloudFront, S3, RDS, Lambda, API Gateway, Cognito, OpenSearch, SQS, SES and CodePipeline, with infrastructure diagrams and an elasticity strategy. (Proposal only; not deployed.)
- Worked hands-on in the AWS console with IAM roles, Lambda and S3, and account cost management.

Automatic Water Dispenser with Telegram Notifications

May – August 2025

ESP32, C++, Telegram Bot API

- Built an ESP32-based automatic dispenser with two water-level sensors driving a pump through a TIP32C transistor with 1N4007 flyback protection.
- Implemented a dry-run interlock: the pump runs only when the bowl is empty and the reservoir still holds water, preventing pump damage. Added notification state tracking to avoid repeat alerts on every monitoring cycle.

Senate Election Information Application

September – December 2024

Kotlin, Android Studio, Firebase, MySQL

- Developed an Android application helping voters prepare for senate elections through candidate profiles and a mock ballot they can print or save for use at the polls.
- Implemented QR code scanning for direct candidate lookup, Firebase Cloud Messaging for deadline reminders, and facial-recognition two-factor authentication for account security.

iLABu — Lab Reservation System

May – August 2024

Node.js, MongoDB, JavaScript

- Built a full-stack laboratory seat reservation system with two account types on asymmetric permissions — students booking 30-minute slots with an anonymous option; technicians reserving for walk-ins and releasing seats after a ten-minute no-show.
- Designed the MongoDB schema for accounts, laboratories, seats and reservations, with cascade handling so account deletion cancels pending bookings.

Penny Juice Website Redesign — UX Case Study

January – April 2025

Figma, UX Research

- Ran a full user-centred design process: heuristic critique, user persona, five-stage journey map, task flow, and eight desktop and mobile screens in Figma using reusable components.
- Conducted User Acceptance Testing scored across seven criteria on both form factors, then iterated on the findings — correcting mobile scaling and navigation, colour contrast, form controls and alignment.

Project-Based Learning — Three 1st Place Awards, iACADEMY

2020 – 2021

C#, Bunifu, Godot, Aseprite

- iRespond (2021): contributed to backend development and UI/UX design for a desktop application on gender inequality in the Philippines, with a separate Android build.
- VaccInfo (2021): designed the UI/UX for a COVID-19 data analytics dashboard built in C# with Bunifu.
- Strain X (2020): created all 2D sprites and game assets in Aseprite and designed the visual-novel-style interface and UI element set for a 2D survival RPG built in Godot.

EDUCATION

De La Salle University – Manila | BS Information Technology

September 2022 – Expected June 2027

Minor: International Studies (Japanese Studies). Coursework in WAN connectivity, advanced routing and switching, system administration, database administration, business applications development, human-computer interaction, internet of things, and IT project management.

CERTIFICATIONS

- CCNA: Switching, Routing, and Wireless Essentials — Cisco Networking Academy, April 2026 (course completion; credential verifiable on Credly)
- Lean Six Sigma White Belt — Council for Six Sigma Certification, March 2026
- JLPT N5 — Japan Foundation, taken July 2026 (results pending)

ACCOMPLISHMENTS

- Grand Prix Champion — 2023 Busan Choral Festival and Competition (International)
- Grand Champion — 2023 National Music Competitions for Young Artists (NAMCYA)
- 1st Place — iACADEMY Project-Based Learning: Strain X (2020), VacclInfo (2021), iRespond (2021)
- Graduated with High Honours — iACADEMY Senior High School, Class of 2022
- 3rd Place (2016) and 4th Runner-Up (2018) — NAMCYA, with Musica Paulinos

PROFESSIONAL ASSOCIATIONS

- De La Salle University Chorale — Internal-Relations Marketing Representative (2022–2025); Productions & Logistics (2025–present)
- iACADEMY Junior Software Developers (iJSD) — PRO, 2021–2022
- Musica Paulinos — Vice President, 2018–2019
- Velocity SHS — Member, 2020–2022

LANGUAGES

- Filipino — Native speaker
- English — Fluent
- Japanese — Basic (JLPT N5 taken July 2026, results pending; studying toward N4)

HOBBIES & INTERESTS

Competitive choral performance, networking and home-lab experimentation, game design, music technology, Japanese language and culture, and open-source software.
